myPREMIO

App for communication with the electric actuator ARI-PREMIO-Plus2G
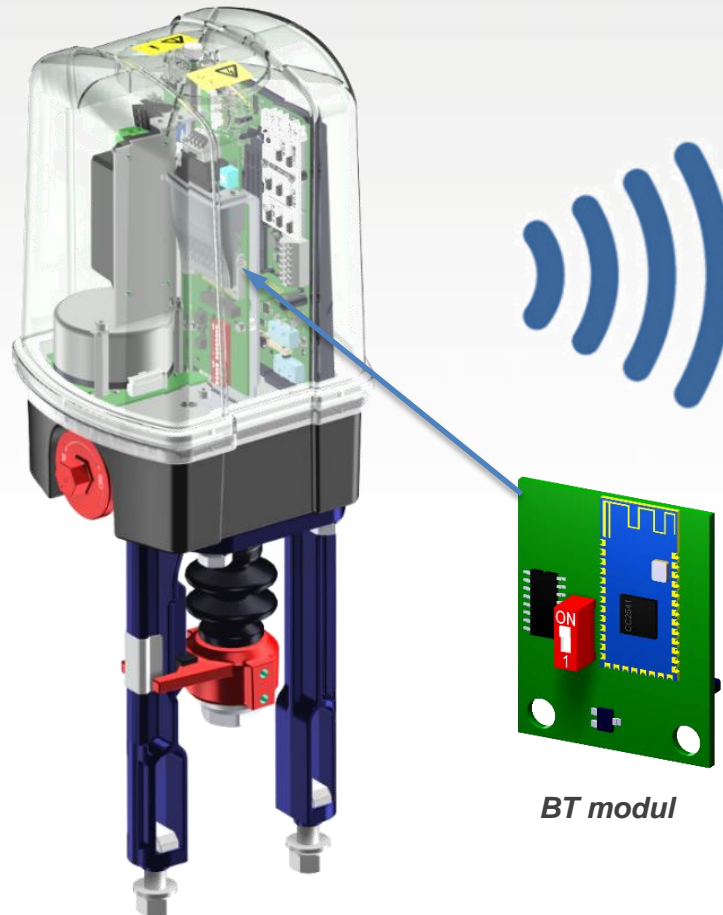

- Remote control
- Parameterization of special functions
- Diagnostic functions
    - Get status information
    - statistics
    - Event logs
    - Trends
    - Histograms
- Service support

myPREMIO
requirements

- **PREMIO-Plus2G**
  with actuator firmware **SW 3.5.0 or higher**

- **Communication package option**
  including:
  - BT-modul
  - LED-Status Indicator (i.a. to display a BT connection)
  - Analog output 4-20mA / 0-10V

- **Smartphone**
  - Android version: 6 or higher
  - iOS version 10.0 or higher
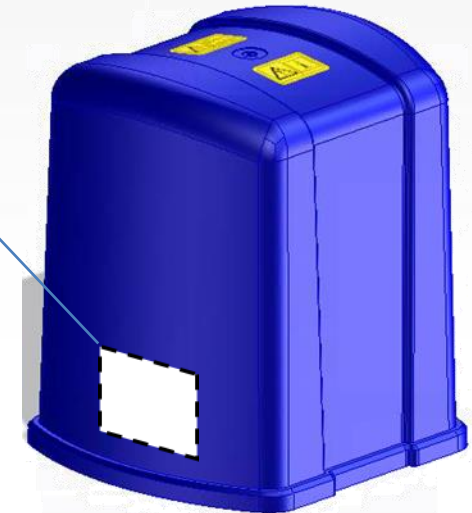

- **Tablet**
 - iOS version 10.0 or higher

BT modul

Where can you download the APP?

- The app is offered free of charge via the Apple Store or Google Play Store.

- The corresponding actuators have a sticker on the cover with a QR code.

- The QR code leads to the Apple - or Google Play Store.

- Optionally, the app is also indirectly linked via the ARI homepage.

Structure of the APP

The three main areas of the APP

- **Control functions for the actuator**
  only after registration with control rights!
  - Automatic - manual operation
  - UP-STOP-DOWN
  - Exact position entry
  - Start of the initialization run

- **Diagnostic functions**
  - Reading out data and error messages
  - Setting software functions - *only after registration with write rights!*
  - Statistics - trends - event logs

- **Data exchange**
  - Sending the actuator data to ARI customer service for analysis and support in the event of a fault
  - Documents and information
  - Login to the actuator for write or control rights

ARI ARMATUREN

Benefits - Summary

The communication package:

► LED status display → on the outside of the actuator shows the current operating status in various colors from green to red

► Integrated analog feedback signal variably adjustable via app and software if required

► BT interface as the basis for using the app

The "myPREMO" app:

► Demo mode → offers the possibility to familiarize yourself with all functions offline. Also ideal for presentations, training courses or simply "study by trying"

► Status message → Clear text display of error messages and possible solutions

► Event log → provides a chronological sequence of settings, changes, messages, etc.

► Diagnostic data → Trend analysis and histogram allow statements on the control behavior and selection of the valve.

► Data exchange → enables fast and uncomplicated remote diagnosis by the ARI experts

► Write rights offer further options such as Setting special functions or remote control.

Your one-stop shop for control, isolation, safety, steam trapping and system business

Dont't hesitate to ask for advice. We'd be delighted to help you in any way we can!
